

6 point harness

Posted by dustinh - 05 Sep 2013 16:17

Hi there,

I finally got my 6 point OMP harness and am in the process of installing it. It appears that the shoulder points can simply be screwed into the rear seat belt mounting points, but the guy at the shop told me most people wrap them around the roll cage. Maybe that is for when there isn't a rear mounting point already.

What is the standard thing to do in 944Spec?

Also, my OMP WRC seat has the 2 leg cushions that come in and out. Are those simply for comfort (meaning you can have them in our out) or do they serve another purpose where they should be in all the time.

Thanks.

Dustin

Should be instructions with your belts. But also look into the NASA rules.

Here is a pdf that should be generic.

www.gforce.com/pdf/Harness_Install_Info.pdf
